The Routledge Handbook of Motor Control and Motor Learning is the first book to offer a comprehensive survey of neurophysiological, behavioural and biomechanical aspects of motor function. Adopting an integrative approach, it examines the full range of key topics in contemporary human movement studies, explaining motor behaviour in depth from the molecular level to behavioural consequences. The book contains contributions from many of the world's leading experts in motor control and motor learning, and is composed of five thematic parts: Theories and models Basic aspects of motor control and learning Motor control and learning in locomotion and posture Motor control and learning in voluntary actions Challenges in motor control and learning Mastering and improving motor control may be important in sports, but it becomes even more relevant in rehabilitation and clinical settings, where the prime aim is to regain motor function. Therefore the book addresses not only basic and theoretical aspects of motor control and learning but also applied areas like robotics, modelling and complex human movements. This book is both a definitive subject guide and an important contribution to the contemporary research agenda. It is therefore important reading for students, scholars and researchers working in sports and exercise science, kinesiology, physical therapy, medicine and neuroscience.

Our legacy 1947/1989 national security system is unsuited for the dynamic and complex global security environment that has developed since the end of the Cold War. Over time, the National Security Council has evolved from the very limited advisory group initially imagined by President Truman to that of a vast network of interagency groups that were developed since 1989. These interagency groups view themselves as deeply involved in integrating policy development, crisis management, and staffing for the President. However, the National Security Staff (NSS) and the national security system are relics of the industrial age -- vertical stovepipes -- in an age that demands that the management of the national security system be conducted at the strategic level. What is required is a true national security strategy based on ends, ways, and means; the alignment of resources with integrated national security missions; and the assessment and accountability of management functions that should be performed by a properly resourced NSS unburdened from the urgency of the 24/7 news cycle. The President's National Security Strategy of May 2010 calls for reform in many of these areas. Section 1072 of the 2012 Defense Authorization Act calls upon the President to outline the changes and resources that are needed in both the executive branch and in Congress to implement his national security strategy. The President's response to this legislative mandate can and should be the first step in a strategic partnership for transforming our national security system, in both the executive branch and the Congress, to that of a system that can meet and anticipate the challenges and opportunities for ensuring our security and well-being.
