It consists of genetic, pathological, demographic, and medical history data for 107 study participants. We'll load it into Rattle by locating the file and pressing the "Execute" button in the top left corner. Rattle makes an initial guess at data types and variable purposes (input, target, etc.). If we wanted to recode any variables as a different type (i.e. make a numeric variable into a categorical one or vice versa), we can do that on the Transform tab.
