The constant growth of the world's population and the decline of the availability of land and soil resources are global concerns for food security. Other concerns are the decrease in productivity and delivery of essential ecosystems services because of the decline of soil quality and health by a range of degradation processes. Key soil properties like soil bulk density, organic carbon concentration, plant available water capacity, infiltration rate, air porosity at field moisture

capacity, and nutrient reserves, are crucial properties for soil functionality which refers to the capacity of soil to perform numerous functions. These functions are difficult to measure directly and are estimated through indices of soil quality and soil health. Soil degradation, its extent and severity, can also be estimated by assessing indices of soil quality and health. "Geospatial Technology for Land Degradation Assessment and Management" uses satellite imagery and remote sensing technologies to measure landscape parameters and terrain attributes. Remote sensing and geospatial technologies are important tools in assessing the extent and the severity of land and soil degradation, their temporal changes, and geospatial distribution in a timely and cost-effective manner. The knowledge presented in the book by Dr. R.S. Dwivedi

shows how remote sensing data can be utilized for inventorying, assessing, and monitoring affected ecosystems and how this information can be integrated in the models of different local settings. Through many land degradations studies, land managers, researchers, and policymakers will find practical applications of geospatial technologies and future challenges. The information presented is also relevant to advancing the Sustainable Development Goals of the United Nations towards global food security.

Management focuses on topics that influence the design of the assessment centre in terms of the competencies being assessed, the exercises that are used and the nature of the event, so that they can deliver what is required; often to change organizational culture and values. Practical examples and case studies are sprinkled throughout the book as international contributors explore cross-cultural implications, and consider how the design, development and use of assessment centres should be adapted to different cultures. Some of the world's leading researchers and practitioners outline their research into new applications for assessment centre methods, showing how they have used it to design and implement specific assessment and development centres. This is a book from which practitioners can see how science

In order to protect company's information assets such as sensitive customer records, health care records, etc., the security practitioner first needs to find out: what needs protected, what risks those assets are exposed to, what controls are in place to offset those risks, and where to focus attention for risk treatment. This is the true value and purpose of information security risk assessments. Effective risk assessments are meant to provide a defensible analysis of residual risk associated with your key assets so that risk treatment options can be explored. Information Security Risk

Web services and service oriented environments are key enablers for the migration of entertainment, business, sociability, science and health-care from the physical world to the virtual world. The result of this on-going migration is a new place very much different from the physical world, one where interconnected services interact with human users, sensors and embedded devices. Yet for this vision to become reality, trust needs to be addressed as members of the global e-society regularly today deal with the question whether they can trust other, unknown parties. Trust is a vital component of internet-based interactions and service-oriented environment, but all too often it is assumed to be an implicit property that exists in the background rather than being an explicit property that is well-defined and quantifiable. While providing trust is

challenging in existing computing systems, providing trust in service oriented environments is much more complex due to the dynamic and adaptable nature of these environment which are often large scale and across domains. To date the problem of trust for service oriented environments has been largely unexplored. This book represents the rst comprehensive coverage of the principles, methods and systems for trust management and evaluation in service oriented environments.
