This book explores the overlapping interests of corporate responsibility and sustainable development, specifically focusing on the dynamics of social change, sustainability governance and evaluation, and creating social value. Corporate Responsibility and Sustainable Development: An Integrative Perspective draws on ideas and research relevant to both concepts, highlighting the interdependent nature of corporate strategy and policymaker ambition. The authors seek to capture that any evaluation of responsibility for sustainable development demands multiple lenses. They propose an integrative

understanding to tackling global challenges around sustainable development and focus on four themes: contextualisation; perspectives on social change; sustainability governance and evaluation; and creating social value. Overall, the book takes an evaluative approach, using these themes as lenses for engaging with global challenges, which encourages reflection and informed action. Written by two highly experienced authors, this book integrates short case studies and chapter questions throughout the text, in order to reinforce learning and help readers reconcile ideas presented with real world issues. It will be an essential resource for tutors and advanced undergraduate and postgraduate students of business, governance and corporate governance, corporate social responsibility (CSR), sustainability and sustainable development, stakeholder theory, business ethics, and politics.

In order to yield the expected benefits, sustainability initiatives need to be undertaken by means of a close cooperation between universities on the one hand, and societal partners on the others. The principle of co-creation and co-execution of sustainability initiatives increases the value for all by mutual learning, and the sharing of expertise and resources. But pursuing sustainability initiatives with a community and societal involvement is not simple. There is a perceived need for a better understanding of how universities can interact with society, in order to support the implementation of the UN Sustainable Development Goals. This book is an attempt to address this need, by a novel approach which focuses on current potentials and challenges, across a wide range of fields and expertise. The book focuses on how the theory and practice of sustainable development interact and shows the need for a continuation of the dialogue among sustainability academics and practitioners, so as to address the issues, matters and problems at hand. The spectrum of themes addressed on this book also entails how environmental values and ethics are applied and the relationship between social, biological and cultural diversity. It also includes a broad disciplinary approach to sustainability, including education, research and case studies, and the links with human-environment relations in a sustainable development context.

Presents a comprehensive analysis of the role of business in safeguarding the environment. It introduces the general issues and context, and then gives a detailed, critical examination of all the key tools of corporate environmental management, including environmental management systems and standards; environmental policies, guidelines and charters; environmental auditing; life-cycle assessment; the measurement of environmental performance; and environmental reporting. The book emphasises systems-based environmental management, and also considers how such an approach might be integrated within local authorities and small and medium-sized companies. It then extends the systems approach to cover continuous environmental improvement, building a corporate environmental profile and moving towards sustainability. Written in a clear and informative style, with checklists, explanatory notes and references for further reading, the book draws on the existing environmental strategies of a number of leading firms. Each chapter is written by contributors involved in ongoing research and consultancy in their specialist area. This is the most authoritative guide available to contemporary approaches to corporate environmental management. Its 'how to' focus makes it essential reading - not only for students and researchers, but for managers faced with the challenge of introducing environmental management strategies into their own organizations. This book is directly aligned to the NEBOSH Certificate in Environmental Management, which is a qualification aimed primarily at those in business who influence the environmental performance of their organisation by the decisions that they make as managers or the actions that they take as operators. This book aims to provide an introduction to the main areas of concern and how the challenges can be addressed. This new edition takes account of recent changes in international guidance and legislation and the recent update of the International Standard in Environmental Management ISO 14001. The contents are important for businesses that wish to stay within the law and avoid adverse publicity. It explains how the concept of sustainability can be achieved in practice and what benefits - especially financial - that can accrue. Recent developments in the definitions of sustainability and the growing interest in the circular economy are introduced. It pays to be ahead of the game because decisions made now need to reflect an awareness of the coming pressures and there are opportunities available that can bring other benefits. This book is intended for candidates for the NEBOSH qualification, but it will also be useful to anyone who wishes to understand the problems and how they can be tackled within their own organisations, be they industry, public service, voluntary bodies, or even as individuals.
