Monsoon: The Indian Ocean and the Future of American Power

The Indian Monsoon Current refers to the seasonally varying ocean current regime found in the tropical regions of the northern Indian Ocean. During winter, the flow of the upper ocean is directed westward from near the Indonesian Archipelago to the Arabian Sea. During the summer, the direction reverses, with eastward flow extending from Somalia into the Bay of Bengal. These variations are due to changes in the wind stress associated with the Indian monsoon. The seasonally reversing open ocean cu

Indian Monsoon Current - Wikipedia

The central premise of Monsoon is that the Indian Ocean, rather than the Pacific and Atlantic, will be the new theatre of power rivalry in the 21st century as a result of the rise of China and India, and the ever growing importance of commerce along this sea route.

Monsoon: The Indian Ocean and the Future of American Power

Monsoon is a book about the geography and geopolitics of the Indian Ocean region. It could be described as a travelogue, but Kaplan is deeply interested in the politics of South Asia as well.

Monsoon: The Indian Ocean and the Future of American Power

Indian monsoon, the most prominent of the world's monsoon systems, which primarily affects India and its surrounding water bodies. It blows from the northeast during cooler months and reverses direction to blow from the southwest during the warmest months of the year. This process brings large

Indian monsoon | meteorology | Britannica

Throughout the last few thousand years the mariners and trade routes of the Indian Ocean have moved to a unique rhythm based upon the prevailing seasonal weather patterns. These are known individually as a monsoon, derived from the Arabic mawsim, meaning a fixed time of year. Two main monsoons can be identified: blowing from the north-east in the winter and the south-west during the summer with a variable weather season in between.

The maritime rhythms of the Indian Ocean monsoon

As a result of this pressure, there was a monsoon movement from the Australian continent through the Indian Ocean and also from the Pacific Ocean from the southwest to the Asian continent. (Also read: 13 Causes Of Ocean Heat Content From Global Warming) Types of Monsoon Wind

Monsoon Wind: Definition, Process, Type, and Impact

A monsoon is a seasonal change in the direction of the prevailing, or strongest, winds of a region. Monsoons cause wet and dry seasons throughout much of the tropics. Monsoons are most often associated with the Indian Ocean. Monsoons always blow from cold to warm regions.

monsoon | National Geographic Society

A monsoon is traditionally a seasonal reversing wind accompanied by corresponding changes in precipitation, but is now used to describe seasonal changes in atmospheric circulation and precipitation associated with the asymmetric heating of land and sea. Usually, the term monsoon is used to refer to the rainy phase of a seasonally changing pattern, although technically there is also a dry phase. The term is sometimes incorrectly used for locally heavy but short-term rains. The major monsoon syste

Monsoon - Wikipedia

The Gruppe Monsun or Monsoon Group was a force of German U-boats that operated in the Pacific and Indian Oceans during World War II. Although similar naming conventions were used for temporary groupings of submarines in the Atlantic, the longer duration of Indian Ocean patrols caused the name to be permanently associated with the relatively small number of U-boats operating out of Penang. After 1944, the U-boats of the Monsun Gruppe were operationally placed under the authority of the Southeast

Monsun Gruppe - Wikipedia

The Intergovernmental Panel on Climate Change (IPCC) describes a monsoon as a tropical and subtropical seasonal reversal in both surface winds and associated precipitation, caused by differential heating between a continental-scale land mass and the adjacent ocean. The Indian Meteorological Department defines it as the seasonal reversal of the direction of winds along the shores of the Indian Ocean, especially in the Arabian Sea, which blow from the southwest for half of the year and from ...

Monsoon of South Asia - Wikipedia

The theme of "Monsoon" is that the Indian Ocean will become the next major commercial waterway for the world (hence the title), because it is the connector of an emerging Africa and a burgeoning economic power in South Asia. He then proceeds to define the role of each of the territories bordering the Indian Ocean in this new order.

The IOBM warming causes precipitation to increase over the tropical Indian Ocean, which forces a Matsuno-Gill pattern in the upper troposphere and strengthens the SAH. Near the ground, the southwest monsoon intensifies over the Arabian Sea and weakens over the South China Sea.

Impact of the Indian Ocean SST basin mode on the Asian

It has to be noted that while trade winds are very active in the south Indian Ocean, they are absent in the north Indian Ocean which is dominated by the monsoon winds. The winds in Mauritius usually blow the whole year from easterly directions, known as south east trade winds.

The Winds of the Indian Ocean - Century Association

As a result, La Nina causes drought in the South American countries of Peru and Ecuador, heavy floods in Australia, high temperatures in Western Pacific, Indian Ocean, off the Somalian coast and a comparatively better monsoon rains in India. Generally, El Nino and La Nina occur every 4 -5 years. El Nino is more frequent than La Nina.

how it impacts India's monsoon? - The Indian Express

The Indian Ocean is the third-largest of the world's oceanic divisions, covering 70,560,000 km 2 (27,240,000 sq mi) or 19.8% of the water on Earth's surface. It is bounded by Asia to the north, Africa to the west and Australia to the east. To the south it is bounded by the Southern Ocean or Antarctica, depending on the definition in use. Along its core, the Indian Ocean has some large marginal ...

Indian Ocean - Wikipedia

Upwelling is a seasonal phenomenon in the Indian Ocean because of the monsoon regime. During the southwest monsoon, upwelling occurs off the Somali and Arabian coasts and south of Java. It is most intense between 5° and 11° N, with replacement of warmer surface water by water of about 57 °F (14 °C).
